

SECURE AI ENABLEMENT

Adopt AI with confidence and accelerate growth with minimal risk

CNS
at Six Degrees

Your AI deployments should be transformational, not risk centres. But lack of governance risks AI transparency, explainability, and accountability, and can lead to significant operational disruption, reputational damage, and financial and legal penalties.

A five-stage journey to AI clarity

Six Degrees' packaged secure AI enablement services take you on a phased journey to AI clarity, ensuring you maximise your investment while minimising the risks AI has the potential to introduce.

And it all starts with a simple **AI Discovery and Baselining Workshop**.

Minimise AI risk. Reduce your exposure to avoidable AI risks.

Streamline AI investment. Ensure your AI investment is continually optimised.

Drive AI innovation. Transform your AI deployments into growth catalysts.

Stage	What We Deliver	What You Receive
Stage One – Discover and Baseline	A one-day day AI Discovery and Baselining Workshop.	See where AI already lives in your business and where it can safely accelerate next. You will leave with a prioritised adoption roadmap.
Stage Two – Govern and Green Light	A 10-day ISO 42001 or NIST AI Risk Management Framework (RMF) Assessment.	Put one control set in place – mapped to ISO 42001 or NIST AI RMF – so your business can confidently say yes to AI at pace, rather than blocking it.
Stage Three – Prove and Assure	Tailored AI Penetration Testing mapped to OWASP LLM Top 10 and MITRE ATLAS.	Pressure-test each use case and agent before it goes live so you launch knowing it's safe, not hoping it is.
Stage Four – Operate and Scale	An assigned Virtual AI Governance Officer.	Run AI in production with live guardrails and a named owner, keeping it dependable and cost-controlled as adoption grows.
Stage Five - Embed	A managed set of AI Runtime Guardrails.	Every time a new model ships or an agent changes, re-assure and refresh – so you keep adopting the latest AI safely and continuously, without slowing down.
