

# NIST AI RISK MANAGEMENT FRAMEWORK ASSESSMENT

CNS  
at Six Degrees

## Manage the risks AI presents to your business and its people

AI presents huge opportunities to businesses – but AI deployments also increase vulnerability to specific threats. Have you considered your exposure to data poisoning, adversarial machine learning attacks, model inversion that can expose sensitive data, and unintended biases affecting compliance?

Six Degrees' NIST AI Risk Management Framework (RMF) Assessment enables you to implement governance processes that ensure AI transparency, explainability, and accountability. By aligning with NIST AI RMF guidelines, you will be able to understand, baseline, and improve your AI implementations while easing preparation for regulations and standards including ISO 42001, the UK AI White Paper, and the upcoming EU AI Act.

The NIST AI RMF integrates seamlessly into your cyber security framework – whether it's ISO 27001, the NIST Cyber Security Framework 2.0, or Cyber Essentials Plus – ensuring AI risk management is addressed as part of your overall business resilience.

Understand, baseline, and improve your AI implementations.

Ensure that your AI deployments are accurate, ethical, legal, and secure.

Reduce your AI-associated cyber risks.

Prepare your business for going through the ISO 42001 certification process.

## Aligned to Your Cyber Security Challenges

**"We don't know where to begin to understand how effective our information and cyber security controls are."**

We will work with your teams to understand your information and cyber security controls, and provide practical, proportionate recommendations to enhance them.

**"We have disconnects between operational staff and senior management that exacerbate these issues."**

The NIST AI RMF Assessment is the perfect mechanism for you to promote engagement between operational staff and senior management. Our consultants will guide you through each stage of the process.

**"Our senior leadership don't fully understand AI governance and the risk from poorly implemented AI tools."**

We will help non-technical senior leadership to understand AI governance and the risk from poorly implemented AI tools, and guide them on where to focus resource.

**"We don't understand AI governance and proportionate risk management for our business, or how to articulate these in a meaningful way."**

The NIST AI RMF Assessment enables you to understand, baseline, and improve your AI implementations and provides specialist, independent assurance of your AI risk management landscape.
