

SIX DEGREES: YOUR COMPLETE MICROSOFT CSP PARTNER

We'll maximise your Microsoft investments while you retain control.

What is a Microsoft Cloud Solution Provider?

Microsoft Cloud Solution Providers (CSPs) like Six Degrees are authorised by Microsoft to supply their services directly to your organisation. We provide you with the ability to purchase Microsoft cloud solutions, on-premises software, and third-party solutions – enabling us to support you throughout your entire Microsoft cloud customer lifecycle.

Why Six Degrees as Your CSP?

Ease of business

We pride ourselves on being large enough to deliver but small enough to care. You'll have a dedicated Account Manager and access to Microsoft licensing and technology specialists. And you'll benefit from the simplicity of one contract, one support team, and one bill for all your Microsoft services.

"Our relationship is very interactive, and I recognise that Six Degrees seeks to understand our challenges and work with us to overcome them. We feel like we're important to you."

– Jay Payne, Group Service and Operations Director, ParentPay

Reduced operational overhead

We will manage your Microsoft relationship for you, acting as your point of contact and raising, supporting, and managing issues directly with Microsoft on your behalf. We can also extend this to deliver an integrated service as your single provider across our network of connectivity, voice, and security providers.

Our Microsoft expertise

By working with us as your CSP partner, you will access deep levels of Microsoft expertise to guide any decisions you make on a more personalised manner than you'd receive from Microsoft directly. We offer a range of packaged workshops and assessments designed to help you on your Microsoft journey, including our Microsoft M365 Licence Review and our Microsoft Security Threat Protection Engagement.

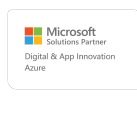

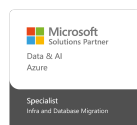

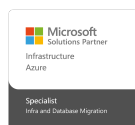

Our access to Microsoft funding

As a Microsoft CSP, we can access funding and resources that will enable you to progress your digital transformation initiatives. We understand the routes to funding to help you build the most compelling ROI and be able to test new technology and concepts.

Value-added services

Leverage our value-added services to drive collaboration, scale in the cloud, protect your business from cyber-attacks, and supercharge your productivity with data and AI. Microsoft demands excellence from Six Degrees as an Azure Expert MSP, and we manage our customers' clouds in a manner that maximises security and ROI.
